

(A1) max-flow: saturating law, $\rho' \rightarrow 0$ at the cut

(B1) max-flow: the cut is the saturated edge set

(A2) min-delay (Kleinrock $1/(c_e - f)$): saturates at capacity

(B2) min-delay: Abilene backbone, computed FAMG equilibrium

(A3) congestion (BPR): no cap, conductance bounded $\Rightarrow$ no fold

(B3) congestion: Sioux Falls, computed FAMG equilibrium
